

# Farmbot Lite

Measure what matters most.

Satellite connectivity

## Smart, standalone tank monitoring.

Farmbot Lite is a compact, standalone monitor designed for water, fertiliser or diesel tanks. Simple to install and effortless to operate, it delivers dependable tank level data. With satellite connectivity, you're always in the know — no matter how far off the grid you are.

# Farmbot Lite

Small investment, big pay-off: the standalone solution.

Farmbot Lite is a streamlined, all-in-one tank level sensor built tough for the bush and designed to last in Australia's harshest climates and most remote locations.

It delivers clear, data-driven insights, helping you spot trends, detect issues early and run your operation more efficiently.

With near real-time alerts sent straight to your device, you can act fast when something's not right — saving time, minimising manual checks and reducing losses.

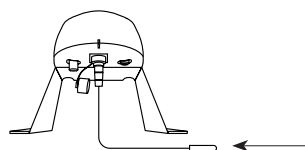

## Key Features

- **Event-driven data with near real-time alerts**  
Keeping you informed about your tank usage patterns to optimise resource management, perfect for your lower use tanks.
- **Simple installation**  
Less than 10 minutes to install. Simple all-in-one design for ease of use.
- **Options available**  
Whether it's water, liquid fertiliser or diesel, the Farmbot Lite helps you stay on top of your tank levels.
- **Always in range**  
Direct-to-satellite communication.

## Technical Specifications

### Hardware
